IRODaT, the International Registry of Organ Donation and Transplantation, publishes a periodical overview of international data on organ donation and transplantation worldwide. On this issue, IRODaT presents an update on the preliminary results of the international organ donation and transplantation activity of 2008.

Different graphics on donor activity (deceased as well as living) were generated, giving an overview on different types and activities on organ donation and transplantation. Through a network of key professionals in the different countries, updates were sent, giving us the opportunity to present data of 57 countries. In the following figures, the countries are listed from the highest pmp number of donation and/or transplantation. The numbers for Deceased Donors include Donors after Brain Death (DBD) and Donors after Cardiac Death (DCD).

Countries that reported their activity for the first time, were indicated in each related slide.

New countries are invited to participate in the project once they start to announce among the international community their organ donation activity. TPM contacts the person in charge of the National coordination or the organisation closer to this activity and asks them to become the country's IRODaT Reporter.

If your country is missing in this table and you wish to provide IRODaT with the information requested, we encourage you to contact us at: lteixeira@il3.ub.edu or tpmconsultant@il3.ub.edu. We will be pleased to include your information in the IRODaT database. Furthermore, specific requests can be sent to this address in order to obtain more detailed and specific information.
